Muscular Dystrophy is a progressive muscle wasting disease and is 100% fatal. In its congenital form the disease leads to severe muscle wasting, causing children to become dependent on wheelchairs at a very early age. Over time they become quadriplegic, suffering from scoliosis and painful muscle contractures and eventually lose the ability to breathe without assistance. There is currently no treatment and no cure. All the money you raise will go directly to funding important research.

A big thank you for helping us to find a treatment or cure.
